HARI OM KASAUNDHAN

AI Engineer | Software Engineer | Python, LLMs & RAG | Available Immediately

Greater Noida, India | +91-9005979045 | hariomkasaundhan988@gmail.com | linkedin.com/in/hari-om-kasaundhan-321b0b2a6
github.com/sangamyo | Portfolio: sangamyo.github.io/terminal

SUMMARY

AI / Software Engineer (B.Tech CSE 2026) building Python backends and LLM applications with FastAPI, PostgreSQL/pgvector, REST APIs, Docker, Retrieval-Augmented Generation (RAG), embeddings and hybrid search. Robotics & AI Intern at Addverb building robot-learning (VLA) datasets with LeRobot, MuJoCo and PyTorch. Ships tested projects with CI/CD and live demos.

TECHNICAL SKILLS

AI / ML & LLM: LLM APIs (Gemini, Claude, Groq), RAG, Prompt Engineering, Embeddings, Semantic Search, Hybrid Search (BM25 + Vector), Generative AI, Machine Learning, Deep Learning, PyTorch, Hugging Face, ONNX Runtime
Languages: Python, SQL, JavaScript, TypeScript, Java, Bash
Backend & Databases: FastAPI, Django, Node.js, Express, REST APIs, PostgreSQL, pgvector, Redis, MongoDB
DevOps & Tools: Docker, Git, GitHub Actions (CI/CD), Linux, pytest, Streamlit
Robotics, CV & Frontend: LeRobot, MuJoCo, OpenCV, MediaPipe, React, Next.js, Tailwind CSS

EXPERIENCE

Robotics & AI Intern | Addverb Technologies (Advanced Robotics, CEO Office), Noida **May 2026 – Present**

- Built teleoperated robot-manipulation datasets (LeRobot format) used to train Vision-Language-Action (VLA) models.
- Automated teleoperation and data-collection workflows with Bash across remote and local machines, replacing manual setup and recording steps.
- Worked with MuJoCo simulation and PyTorch-based VLA training/evaluation pipelines for robotic manipulation tasks.

Full Stack Developer Intern | PureWashr (Startup India recognised) **Mar 2024 – Feb 2025**

- Built a MERN platform (MongoDB, Express, React, Node.js) with real-time scheduling and order tracking for 500+ users.
- Designed REST APIs and integrated 15+ vendor workflows for booking, pickup and order-status updates.
- Reduced API latency by 40% through MongoDB query optimisation, indexing and leaner API response design.

Freelance Software Developer **Jun 2023 – Feb 2024**

- Built JWT authentication, admin dashboards and automation scripts for clients (Node.js, Express, MongoDB).
- Reduced API response time by 50% by adding caching for frequently read endpoints.

PROJECTS

DataLens: LLM Dataset Quality Platform | Python, FastAPI, pgvector, Redis, Docker **Live Demo | GitHub**

- Engineered a FastAPI + Redis/arq pipeline that imports Hugging Face instruction datasets and runs 8 quality checks per sample (MinHash/LSH near-duplicates, PII, refusals, length, formatting).
- Built LLM natural-language search that emits a validated filter (never raw SQL) and semantic search with bge-small embeddings in pgvector + HNSW (~6 ms top-25 queries).
- On dolly-15k (15,011 rows): import ~7 s, QC ~15 s; found 16 duplicates, 9 near-duplicates, 8 PII rows; 280 pytest tests.

PDF RAG Chat: Multimodal RAG | Python, Groq LLM, PyMuPDF, BM25, Streamlit **Live Demo | GitHub**

- Ingests text, tables and vector-drawn charts with PyMuPDF; a vision LLM describes each chart (axes, series, values) so figures become searchable.
- Hybrid retrieval (bge-small embeddings + BM25, reciprocal rank fusion) streams grounded answers with page citations; ingest cached by file hash.

RAG Chat: In-Browser RAG | JavaScript, transformers.js, WebLLM, WebGPU **Live Demo | GitHub**

- Client-side RAG with no server or API key: chunking, bge-small embeddings in a Web Worker, hybrid BM25 + cosine retrieval, and Qwen2.5 / Llama 3.2 on WebGPU streaming cited answers.
- Grounding check withholds unsupported answers; citation repair, extractive fallback; 17 unit tests in CI.

Jarvis: AI Voice Assistant | Python, Tkinter, JavaScript, Web Speech API **Live Demo | GitHub**

- Voice intent engine (Python + JavaScript): live weather, Wikipedia, dictionary, calculator, timers, notes, app launching.

ATS Resume Checker | Python, Google Gemini API, Streamlit **Live Demo | GitHub**

- Scores resumes against a job description with the Gemini API; reports missing keywords via structured JSON output.

Other: Ghibli Image Converter (AnimeGANv3, ONNX Runtime, WebGPU); SYNCRONET-AI adaptive traffic signals (Python, Pygame, WebAssembly); Hand Gesture Control (OpenCV, MediaPipe); AlgoFlow Tracker (Next.js, MongoDB).

EDUCATION

B.Tech, Computer Science & Engineering (lateral entry) | CGPA 7.8/10 **2023 – 2026**
G L Bajaj Institute of Technology & Management, Greater Noida (AKTU)

Diploma, Computer Science | 71% **2020 – 2023**
Government Polytechnic Deeh, Unnao (BTEUP)

Certifications: Java & Problem Solving (Apna College); Python and Programming in C (Infosys Springboard)
